Vision

Our goal is to become a global mobility and energy service provider within ten years, hence making a significant contribution to reducing global CO$_2$ emissions.

In order to protect resources and the environment, annual vehicle production volumes around the world must be significantly and permanently reduced. Only intelligent mobility concepts, which are suitable for everyday use and resource-conserving, will enable the implementation of this vision.

The Sion is the beginning of the mobility of the future.

All details provided for Sono Motors’ products are preliminary. Information about the vehicle is based on the Sion prototype’s current planning and technology at the time of publication of this document. Errors are explicitly reserved. The products described here are subject to change as part of the ongoing development of our products. We do not accept any liability for errors or inaccurate information. © Sono Motors 2019
Dear Community, Dear Readers,

At the moment we are preparing the series production of the Sion. All information regarding the products and services of Sono Motors in this information sheet is hence preliminary. All information about the vehicle is based on the Sion prototype’s current development, planning, and technology at the time of publication of this document. Errors are explicitly reserved. The features of the Sion and/or services that are described here are subject to change as part of the ongoing development of the Sion. Sono Motors does not accept any liability for errors, inaccurate information, and/or completeness. © Sono Motors 2019
The design of the Sion adheres to the principle of form follows function. A key design feature is the seamless integration of the solar cells into the body.
Exterior

The distinguishing characteristic of the exterior is the full-surface integration of the solar cells, which completely redefines the body. The hood, fenders, sides, roof and rear of the vehicle carry solar cells that visually blend into the surface. The Sion thus becomes an SEV, a Solar Electric Vehicle, whose battery can additionally be charged by the power of the sun. The system is protected by a robust, scratch-resistant polymer.
Dashboard

The dashboard's cleanly structured and subtle design makes it easy for you to check up on all important information at once. There is the speed and current charge level, and you also see a continuous display of how much extra solar range your viSono system is generating.

Interior

Simply put, the Sion’s interior has been designed to be as clear and straightforward as possible. The cabin features our natural air filter system, breSono, alongside the vehicle’s infotainment system that comes with a 10 inch display.
Features

The Sion meets all the requirements of an electric car, fully suited for everyday use: a range of 255 kilometers under the WLTP standard, rapid charging, a carefully designed interior and an optional tow bar. The large trunk offers enough space to easily stow all your shopping. Over the following pages, we will present the unique selling points of the Sion.
Power is where you park it! The viSono system is a real innovation and is based on the idea of energy generated by the sun. With solar cells seamlessly integrated into the entire body, the Sion can easily charge its battery through the sun. Thus, under ideal conditions, up to 34 kilometers of additional range per day can be achieved with pure solar energy – CO₂ neutral and completely free of charge. This means full self-sufficiency on short distances. For solar integration, we use monocrystalline silicon cells that produce energy even under cloudy skies or in the shade. At peak performance, the integrated cells can generate up to 1.2 kilowatts.

All details provided for Sono Motors’ products are preliminary. Thanks to the bidirectional charging technology, the Sion can draw and store energy and, moreover, share it too. A regular household plug (SchuKo) can be used to power all common electronic devices with up to 3.7 kW. The Sion can deliver even more power when using a Type 2 plug. You will be able to power other electric cars and high-voltage devices with up to 11 kW. Combined with viSono, the Sion can be your power plant on wheels.

**Charging Capacity in the Series**
- 50 kW DC via CCS
- up to 11 kW AC via Type 2 + SchuKo

**Discharge Capacity in the Series**
- 11 kW AC via Type 2
- 3.7 kW via SchuKo
Breathe! We have integrated a special moss into the dashboard for the breSono air filtration system. It uses electrostatic gravitation to filter up to 20 percent of particulate matter out of the air while offering positive effects for the temperature and humidity inside the Sion. You won’t have any effort with it. The moss takes care of itself.
reSono comes from the word repair and stands for an intelligently designed maintenance system that keeps costs as low as possible. By publishing a workshop handbook, we have made it possible to establish an extensive network of independent mechanics while keeping costs low for you. You can have maintenance and repairs carried out on your Sion in three different ways:

1. An instructional video and catalogue ensure that you can install replacement parts in your car without needing much prior knowledge.

2. If you don't feel up to it you can easily bring the Sion into the shop for repairs. We don't use mechanic certifications or develop proprietary technological standards. Anyone is free to look at our workshop handbook. As a result, there will be an extensive network of partners who offer you repairs and service at an affordable price.

3. We are planning to cooperate with a well-known European service provider for any repairs involving high-voltage or body parts. Consequently, you can be sure that your Sion will be in good hands and repaired expertly.
Information

Battery
The lithium ion battery has a capacity of 35 kWh and features water cooling. The battery capacity is sufficient for a range of 255 km under the WLTP standard. Our plan is for you to be able to rent or lease the battery or buy it outright.

Motor
Offering 120 kW (163 HP) in connection with a single-speed transmission, the three-phase synchronous motor makes sure you will always enjoy driving the Sion with up to 140 km/h. The maximum powertrain’s operating voltage is 400 volts.

Tow Bar
With a towing capacity of maximum 750 kg, you can tow small trailers with no problem.

Safety
Safety is extremely important to us. That is why the Sion comes equipped with ABS, driver and passenger airbags and ESP.

**Dimensions in MM**

- Total length: 4,290 mm
- Total width: 1,830 mm
- With exterior mirrors: 2,100 mm
- Wheel base: 2,770 mm
- Track width front: 1,580 mm
- Track width rear: 1,590 mm
- Height: 1,670 mm
- Trunk sill height unladen: 780 mm
- Maximum trunk opening width: 1,100 mm
- Trunk opening height: 700 mm
- Maximum loading length (tailgate to front seat): 1,600 mm
- Loading length behind rear seats: 800 mm
- Trunk volume in liters (non VDA standard): 650 mm
- With rear seats folded down: 1,250 mm
Features

• Two year warranty or 100,000 kilometers (standard warranty)

Exterior
• Tire repair kit (12 volt compressor and tire sealant)
• Exterior mirrors same color as body
• LED headlights
• Windshield wipers with intermittent operation
• Full-surface solar integration to generate additional range through the sun
• All-weather tires / tire size (205 / 60R16)
• Steel wheels / 16 inches / anthracite

Interior
• ISOFIX children’s seat connectors
• Three point seat belt
• Electric windows
• Folding rear seat backs, divided (60/40)
• Front seat heating
• Single zone automatic climate control
• Integrated breSono system with ambient lighting

Electronics
• Charging plug under hood with separate cover, charging capacity automatically adjusted
• Charging capacity up to 50 kW DC and up to 11kW AC
• Central locking
• Range optimised using brake energy regeneration

• Instrument cluster with econometer, body computer module, external temperature display
• Infotainment system with integrated connectivity, 10 inch display, USB connection and Bluetooth
• USB (2x Type C) and cup holders located in center console
• Cruise control
• Four speakers in the front of the car
• Mobility services/goSono systems: powerSharing, rideSharing, carSharing

Safety
• Anti-lock braking system
• ESP with traction control
• Electronic power steering
• Driver, passenger and side airbags
• Passenger airbags can be deactivated
• Seat occupant detection
• Rear parking assistance
## Technical Details

### Steering
- Turning circle (m): <11 m
- Suspension: MacPherson

### Driving Performance
- **Maximum speed**: 140 km/h
- **0–100 km/h**: < 9 seconds
- **Electricity consumption**: ≈ 14 kWh/100 km
- **Range (WLTP)**: 255 km

### Weight
- **Unladen weight ready to drive**: approx. 1,400 kg
- **Maximum authorised mass**: approx. 1,950 kg
- **Cargo**: approx. 465 kg

### Engine
- **Motor**: Three-phase synchronous motor
- **Transmission**: Single-speed
- **Operating voltage**: 278–400 volts
- **Power**: max. 120 kW
- **Torque**: max. 270 Nm
- **Recuperation**: max. 50 kW
- **Battery**: 35 kWh

### Charging
- **Charge**: 50 kW (CCS) + up to 11 kW (Type 2)
- **Discharge**: 11 kW (Type 2) + 3.7 kW (SchuKo)

### Tow Bar
- **Nose load**: 50 kg
- **Max. capacity**: max. 750 kg
Charging Systems

You can charge the Sion at nearly any charging station in Europe using any of three different charging methods: SchuKo, Type 2 and CCS.

European Household Plug (SchuKo)
With this plug, the time taken to fully charge a completely empty battery up to 100 percent can be up to 13 hours, depending on the capacity of the socket.

Standard Charging Station (Type 2)
This method takes 2.5 hours to provide 80 percent charge and 3.2 hours for 100 percent.

Rapid Charging Station (CCS)
The Sion can be charged up to 80 percent in 30 minutes using CCS. You will have to allow for another 30 minutes for a full 100 percent charge. Nevertheless, 80 percent provides 200 kilometers range, which is often enough to take you to the next rapid charging station.
We offer a variety of services with the Sion, combining innovative mobility with sustainability. The goSono app brings together three important aspects of the Sion: powerSharing, rideSharing and carSharing. You can use your phone to provide other people with electricity, a ride or your Sion. The data connections of our vehicle as well as the automatic emergency call service eCall are controlled by the Connectivity Control Unit (CCU) from Bosch.
powerSharing

The goSono app, in combination with our biSono system, makes sharing the energy stored in your Sion easy and straightforward, turning it into an independent source of energy. You simply decide on how much electricity you are willing to share and at which price. Other app users will see your Sion marked on a map as a mobile charging station that they can head to as they wish.

rideSharing

With the goSono app, you can offer other users a ride. Anyone wanting to use the service will send you a request. They will get a notification if you accept the request and then you can just pick them up. A great way to meet new people, lower your costs, and help the environment – and it is all made easy.
carSharing

The integrated carSharing function enables you to share your Sion with other people. Use the goSono app to decide for how long and with whom you would like to share your Sion. Everyone will be able to benefit from your Sion as a result – including your wallet and, most importantly, the environment.

Reserve Your Sion

Become a supporter of our vision! During the first stage, you can pre-order and make a down payment on a Sion. It comes with a two-week reflection period. In the second stage, Sono Motors will offer you a contract to purchase a Sion. Again, you’ll have a two-week reflection period during which you can cancel the contract. You have the possibility to pick up your Sion directly at the plant in Trollhättan. Additionally, we are working on an entirely new delivery concept. For an extra charge it will probably be possible to deliver your Sion to your desired location as well.

Here is how your Sion comes to you

Step 1: Preorder
The first step is to preorder and make a down payment on a Sion. It comes with a two-week right of cancellation.

Step 2: Purchase Contract
In the second step, Sono Motors will offer you a contract to purchase a Sion. Again, you will have a two-week right of cancellation for the contract.

Step 3: Delivery
You have the possibility to pick up your Sion directly at the plant in Trollhättan. Additionally, we are working on an entirely new delivery concept. For an extra charge it will probably be possible to deliver your Sion to your desired location as well.

Sion Production

The Sion is the first series-produced SEV (Solar Electric Vehicle) whose battery can also be charged by the sun. The Sion is produced in Europe. This is how we keep transport and delivery distances short, as sustainability and climate protection are particularly important to us.

With our production partner NEVS, we share the vision of a climate-friendly and forward-looking mobility. That is why we will produce the Sion using 100 percent renewable energy. All CO2 emissions that cannot be avoided or reduced along the supply chain and during the Sion production will be fully offset by us.

The costs for the CO2 offset are already included in the vehicle price. We will start production in the second half of 2020 and manufacture the Sion at the former cult brand SAAB plant in Trollhättan, Sweden.

Sion Test Drive

We bring the Sion to you! More than 13,000 people have already experienced and tested the Sion. On our test drive tours throughout Europe we want to share our vision of mobility with you. Subscribe to our newsletter and stay up to date on the current test drives.
